Topic: Claude vs. ChatGPT vs. Gemini – What's the Difference?

RGE Tech Tips from the Field – Client Edition - Addendum

Topic: What is a Chatbot?

1. Your Digital Assistant

* A chatbot is a program that mimics human conversation. Think of it as a digital co-pilot ready to help you write emails, find recipes, or explain complex topics.

*** Chip's Tip: They don't "think" like we do; they are very advanced tools that predict the best way to answer your questions.**

2. Where to Find Them

* These assistants live on different platforms, much like choosing between a Ford, a Chevy, or a Toyota:

* ChatGPT: the popular "all-rounder."

* Gemini: Google's assistant (great if you use Gmail).

* Claude: known for being thoughtful and easy to talk to.

*** Chip's Tip: You can access all of these through a simple website or an app on your smartphone. For convenience, the the 3 chatbots listed below (in the AI credits) are direct links to their respective websites!**

*

3. How Can They Help You?

*

* You can ask a chatbot to summarize a long article, draft a polite "thank you" note, or even help troubleshoot a tech issue.

*** Chip's Tip: Treat it like a conversation. If the first answer isn't perfect, just ask it to "try again" or "make it shorter."**

The Bottom Line: Whether it's ChatGPT, Gemini, or Claude, these tools are here to make your digital life easier. Give one a try today!
